

Builder

All things you should know about Builder

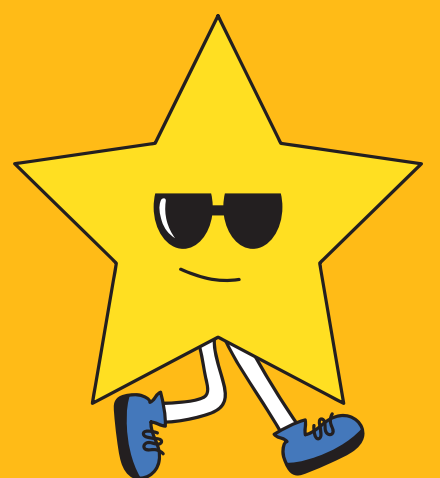

What is Builder?

It belongs to the creational
category.
It creates a complex object
step by step.

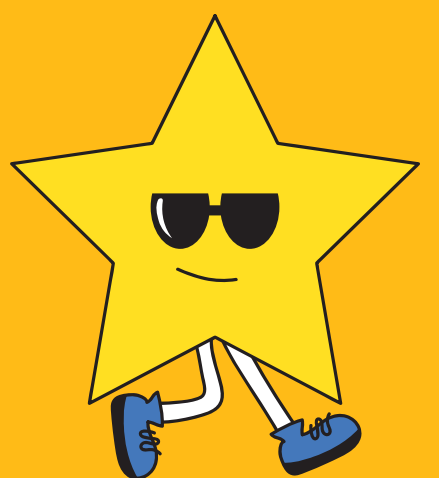

Shirin Monzavi

Problem

Assume, there is an RTF (Rich Text Format) reader which should be able to transform the content of RTF documents into multiple formats such as: plain ASCII text, text widget and so on. The problem is the number of possible conversions. How can we add a new conversion **without modifying** the reader?

Collaborations

Usability

The algorithm for creating a complex object should be independent of the parts that make up the object and how they're assembled.

The construction process must allow different representations for the object that's constructed.
