# What is **CRUD**?

**CRUD** stands for:

1. **Create** – Add new data
2. **Read** – View data
3. **Update** – Edit existing data
4. **Delete** – Remove data

These are **4 basic operations** on a database.

# 1. Create

Used to **insert new records** in the database.

**Example:** A new user signs up.

🧠 Backend uses **POST method**.

➡ **Add new data to the database.**

```
app.post('/users', async (req, res) => {  
  const user = new User(req.body);  
  await user.save();  
  res.send(user);  
});
```

CodeHelping

## 2. Read

Used to retrieve existing data.

**Example:** Displaying all products on an e-commerce site.

🧠 Backend uses **GET method**.

➡ **Fetch data from the database.**

```
app.get('/users', async (req, res) => {  
  const users = await User.find();  
  res.send(users);  
});
```

CodeHelping

## 3. Update

Used to change existing data.

**Example:** Editing a blog post or updating.

Backend uses **PUT** or **PATCH** method.

➡ **Modify existing data.**

```
app.put('/users/:id', async (req, res) => {  
  const updated = await User.findByIdAndUpdate(  
    req.params.id,  
    req.body,  
    { new: true }  
  );  
  res.send(updated);  
});
```

## 4. Delete

Used to remove data.

**Example:** Deleting a comment or user.

Backend uses **DELETE** method.

➡ **Remove data from the database.**

```
app.delete('/users/:id', async (req, res) => {  
  await User.findByIdAndDelete(req.params.id);  
  res.send({ message: 'User deleted' });  
});
```

## Why **CRUD** is Important?

**Every app you use** — Instagram, YouTube, Amazon — uses **CRUD** behind the scenes to manage user actions and data.
