Swipe

SOLID Principle

Single Responsibility Principle

- Ensures a class focuses on one responsibility within the application.
- Helps reduce complexity by separating concerns in the codebase.

SOLID Principle

Open/Closed Principle

- Software entities should be open for extension but closed for modification.
- Keeps the system stable while allowing safe feature additions.

 [iasimnoor](https://www.linkedin.com/in/iasimnoor)

SOLID Principle

Liskov Substitution Principle

- Subclasses must behave consistently when used in place of base classes.
- Prevents issues when inherited types are used interchangeably.

Asim Noor
 [iasimnoor](https://www.linkedin.com/in/iasimnoor)

SOLID Principle

Interface Segregation Principle

- Clients should not be forced to implement unused interface members.
- Promotes cleaner code by creating small and focused interfaces.

Asim Noor
 [iasimnoor](https://www.linkedin.com/in/iasimnoor)

SOLID Principle

Dependency Inversion Principle

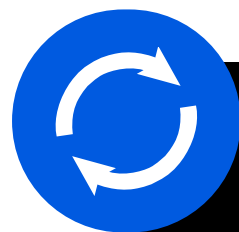

- High-level modules should depend on abstractions, not concrete types.
- Improves flexibility and supports better test-driven development.
